Oliver®

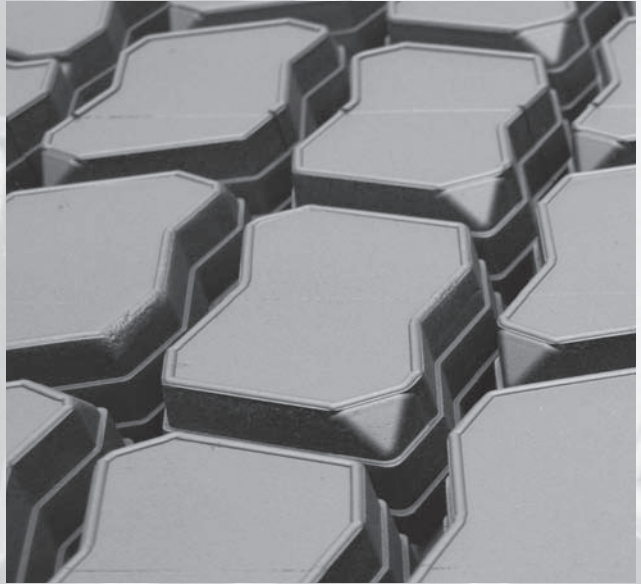

An Exclusive Feature by Oliver

VDIplus[®]

VDIplus[®] is a new Oliver exclusive feature that has two extremely useful benefits that every transportation and logistics company can utilize. **VDI**plus[®] acts as a **V**isual **D**epth indicator, *plus* it is a stone ejector and reduces foreign material retention. This feature results in benefits no other retread product in the industry can deliver.

With easy visual tread depth gauging, you can enhance your fleet operations budget planning process, while better identifying and enforcing your pull point requirements. The reduced lodging of foreign material abates the usual stone drilling conditions and casing penetration issues that typically occur in the trucking industry.

The **VDI**plus[®] points are strategically placed and appear in several of our precure tread designs. They really make sense when it comes to protecting your investment. Make **VDI**plus[®] work for your fleet operation.

The vision of the Oliver family of products and services is to continually provide simple and unique benefits, plus opportunities that assist fleet operations in streamlining their overall tire and service expenditures.

Contact your Oliver Territory Manager for additional information about **VDI**plus[®].
