

Serra-Sipes by Oliver

SERRA-SIPE INFORMATION

- Unique to Oliver products
- Enhances traction and overall tire wear
- Improves mileage
- Cooler running
- Thousands of serrated edges
- Must be used on approved treads

Serra-Sipes are unique to Oliver. They are serrated edges cut across the tread, creating thousands of tiny edges to grip the road while improving the tread's flexibility. The flexing action allows the tire to expel excess water on wet roadways while reducing heat generation and stress build-up in the tread.

The extra gripping improves the margin of safety when driving on slick surfaces. Increased traction of trailer tire treads reduces the chances of skidding in unexpected braking situations.

Some users report that when Serra-Sipe is used on trailers and low torque drive tires, tread mileage improves significantly.

Serra-Sipe is not recommended for use on high torque and high horsepower applications.
